

Pets Abroad

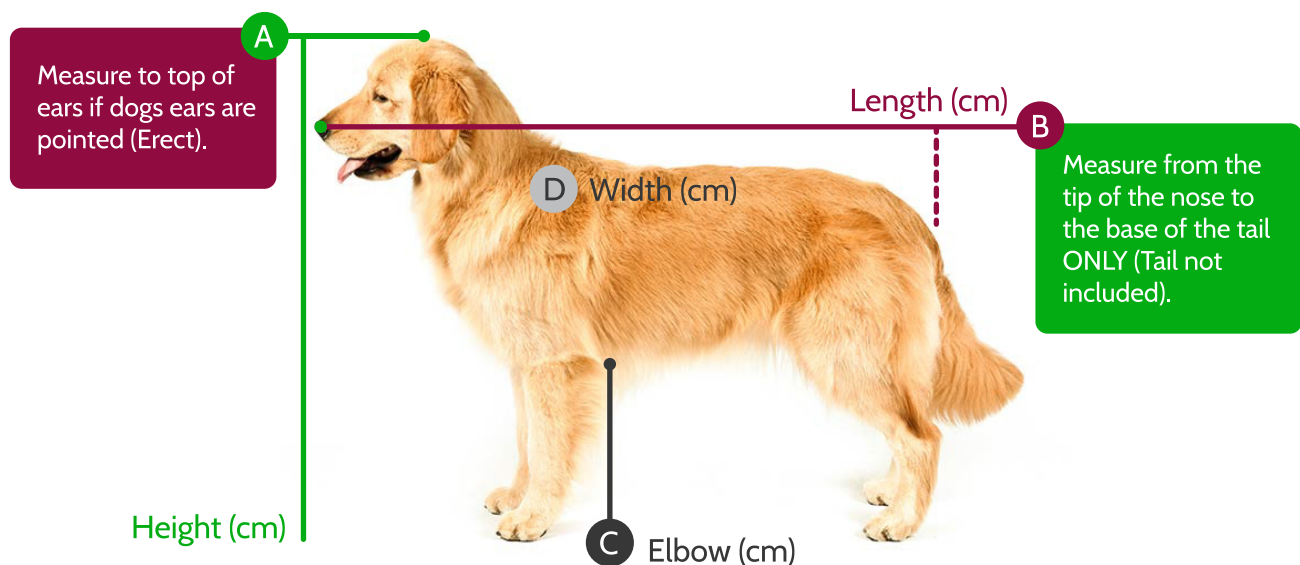

Measurement Requirements

We understand that pets travel is very stressful and hectic exercise.

That's why we have compiled this helpful PDF to help with an important step in getting your pawsenger/pawsengers ready for take off.

It is very important to measure your pets as accurately as possible. We will use these measurements to determine the correct crate size. If incorrect measurements are supplied, then the kennels will be built incorrectly. Incorrectly built kennels as a result from incorrect measurements supplied are not exchangeable or refundable and will ultimately result in additional charges and delays.

This is important for us to be able to quote you accurately.

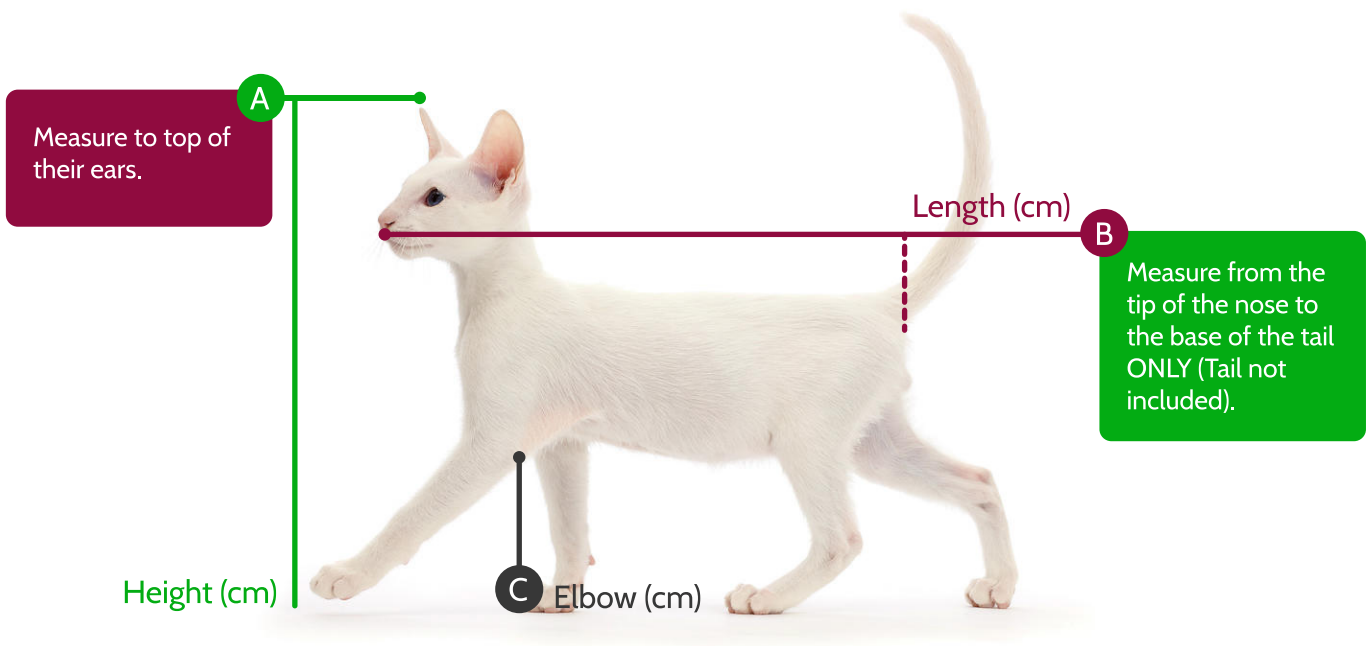

- A** Height (cm) - From the floor to the tip of the ears if they have pointy ears, otherwise to the top of the head.
- B** Length (cm) - From tip of nose to the base of the tail (tail not included).
- B** Elbow (cm) - From tip of the elbow to bottom of the paw.
- D** Width (cm) - From Shoulder to Shoulder.
